Adding pictures to a listing without having to worry about mobile upload photos

Open facebook with your browser, not your App. The top of your screen should look similar to this:

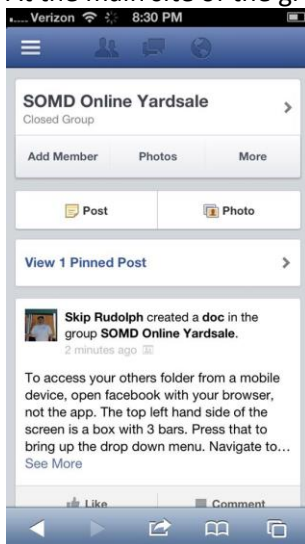

Press the 3 bars at the top left of the screen to pull up your drop down window (should look like this)

Navigate to the group of your liking under the "groups" tab.
At the main site of the group you should see "post" or "photo" (looks like this)

Click on Post then add your description (Will look like this before pressing enter and entering your description)

After pressing done / enter to post your description, click on your post to bring up a comments section that looks like this:

Add pictures one at a time to your posting. These do not take up space on the Loose Photos section of the website. Instead it will leave them in "La La Land".

The only problem with posting this way is that you will not be able to find the photos, instead you will have to use the search feature within the site. This feature is on the "desktop" view.
